The Learn, Build, Connect framework

A community-driven path to digital health interoperability

Moving beyond purely technical fixes to prioritise **social infrastructure** (trust, collaboration, and local ownership) as the foundation for seamless global health interoperability, addressing the challenge of the "pilot trap".

From fragmentation to integration

Addressing fragmented health data silos to achieve seamless global health interoperability.

COMMUNITY AS THE FOUNDATION

Sustainable transformation depends on social infrastructure (trust and collective ownership) rather than just top-down technical interventions.

ENDING THE "PILOT TRAP" AND SILOS

Replaces fragmented, donor-driven "point solutions" with modular, standards-based architectures that scale across national health systems.

PROVEN SUCCESS IN THE INDO-PACIFIC

Applications in Fiji and the Philippines demonstrate that early co-design and inclusive participation accelerate policy alignment.

01

LEARN

DEVELOPING SHARED KNOWLEDGE

Cultivates a shared language through competency-based education in open standards like FHIR and SNOMED CT.

PRIMARY FOCUS
Individual & institutional capability

KEY OUTCOME
Shared understanding

02

BUILD

CREATING INNOVATION SPACES

Provides technical "sandboxes" (like FHIRLab) to test architectures and validate standards before national rollout.

PRIMARY FOCUS
Practical infrastructure & tools

KEY OUTCOME
Technical confidence

03

CONNECT

SUSTAINING COMMUNITIES

Fosters long-term collaboration through Connectathons and Communities of Practice to ensure ongoing innovation.

PRIMARY FOCUS
Social infrastructure & networks

KEY OUTCOME
Long-term sustainability

CO-FUNDED BY CSIRO Australian Aid
